Appellant's Brief Under 37 C.F.R. §1.192 In Support Of
Appellant's Appeal To The Board Of Patent Appeals And Interferences

Dear Sir:

The Appellant hereby submits this Brief in support of their appeal from a final decision by the Examiner, mailed November 18, 2003, in the above referenced case. The final decision was in response to arguments filed on Oct 10 2003, in response to an earlier office action, mailed July 31, 2003. Appellant respectfully requests consideration of this appeal by the Board of Patent Appeals and Interferences for allowance of the present patent application.

04/19/2004 JBALINAN 00000131 10087098

01 FC:1402

330.00 DP

(1) Real Party In Interest

The real party in interest is Wildseed, Inc, having its primary place of business at 10210 NE Points Dr. Ste 300, Kirkland, WA 98033.

(2) Related Appeals And Interferences

To the best of Appellants' knowledge, there are no appeals or interferences related to the present appeal, which will directly affect, be directly affected by, or have a bearing on the Board's decision.

(3) Status Of The Claims

Claims 80-100 were rejected in the Final Office Action dated November 18, 2003.

Claims 80-100 remain pending herein and are reproduced, as pending, in Appendix A.

(4) Status of Amendments

Claims 12 and 20 are amended concurrent with this submittal to correct informality problems noted by the Examiner.

(5) Summary of the invention

Embodiments of the present invention include a novel "intelligent" interchangeable cover for personalizing an electronic apparatus, such as a mobile phone. The cover having an exterior surface non-functionally decorated to support a non-functional theme, and an electronic component with logic/data to personalize the electronic apparatus with characteristics complementary to the theme. Further, the pending claims on appeal are directed towards embodiments where the cover is structurally adapted to only <u>partially</u> cover a portion of the front surface of the electronic apparatus <u>not occupied by a display and keys</u> of the electronic apparatus.

(6) Issues Presented

I. Whether claims 80-100 are patentable under 35 U.S.C. §103

(7) Grouping of claims

For purposes of this appeal, claims 80-100 stand or fall together.

(8) Arguments

Rejection of claims 80-100 under 35 U.S.C. §103 was improper because Wycherly and Sylvan in combination failed to suggest the invention as claimed.

The law is well settled that in determining legal obviousness, "the scope and content of the prior art are to be determined; differences between the prior art and the claims at issue are to be ascertained; and the level of ordinary skill in the pertinent art resolved. Against the background, the obviousness or non-obviousness of the subject matter is determined." *Graham v John Deere Co. Supreme Court of the United States*, 1966, 383 US, 1, 86 S.Ct. 684, 15 L.Ed.2d 545.

Independent claim 80 as pending recites in pertinent part:

"a cover body to mate with a body of an electronic apparatus, to partially cover a portion of a front surface of the body of the electronic apparatus not occupied by a display and a plurality of keys of the electronic apparatus (hereinafter, the "partial coverage limitation"), ..." (underline and annotation added).

Accordingly, claim 80 clearly requires the cover body

- a) to mate with a body of an electronic apparatus, and
- b) to <u>only</u> partially cover a portion of the front surface ... <u>not occupied by a</u> <u>display and a plurality of keys of the electronic apparatus.</u>

Thus, by virtue of the <u>partial coverage limitation</u> recited, claim 1 is inherently directed towards an "intelligent" <u>partial housing cover</u> or a <u>non-housing cover</u>, as it leaves part of the front side of the electronic apparatus (not occupied by the display and the keys) <u>uncovered</u>.

In rejecting claim 80, the Examiner acknowledged that Wycherly does not teach such an "intelligent" partial cover, as Wycherly's cover is <u>a housing cover that covers</u> the entire front side the mobile phone. However, the Examiner asserted Sylvan's "removable user interface" remedied Wycherly's deficiency in teachings. A person of

ordinary skilled in the art, would be motivated to modify Wycherly's full length housing cover to arrive at the <u>partial housing/non-housing cover</u> of the claimed invention in view of Sylvan's teachings. For at least the reasons stated below, Appellant respectfully submits the Examiner erred.

First of all, Syvlan's teachings are directed towards end user interfaces, more specifically a removable user interface to make soft end user interface more user-friendly. Accordingly, Applicant submits Sylvan is non-analogous art. One of ordinary skill in the art of designing interchangeable covers for a portable electronic device (mobile phone in particular) would not look to Syvlan's teachings on end user interfaces for suggestions to modify/improve an "intelligent" interchangeable front cover.

Even if we are to ignore that, Sylvan's removable end user interface merely not cover the portions of the display occupied by the soft end user interface elements, due to its purpose to assist a user in interacting with the soft end user interface elements render on the display. Beyond that, Sylvan's removable end user interface covers the remaining areas of the display (see e.g. Fig. 6, 8 or 9 of Sylvan). Thus, Applicant submits Sylvan merely teaches or suggests to one of ordinary skill to leave the end user elements to be interacted by the user uncovered.

It provides no motivation or suggestion to one of ordinary skill why one would further leave other areas <u>not required for user interaction</u> also uncovered (which is what the "partial coverage limitation" of claim 1 inherently requires).

In particular, it provides no motivation or suggestion to one of ordinary skill why one would modify the full extent front housing cover of Wycherly to a partial housing cover, and leaves some of the internal components in the front of the electronic apparatus exposed.

If no internal components in the front of the electronic apparatus are to be exposed, then the Wycherly cover has fundamentally been changed from a housing

<u>cover to a non-housing "accessory" cover</u>. Applicant submits Sylvan fails to provide such motivation to one of ordinary skill in the art of "interchangeable cover".

Accordingly, Applicant submits the "partial housing" or "non-housing" cover embodiments directed towards by claim 80 is not obvious, in view of Wycherly and Sylvan combined.

Claims 86 and 94 contain in substance the same limitation of claim 80.

Accordingly, for at least the same reasons, claims 86 and 94 are also patentable over Wycherley and Sylvan combined.

Claims 81-85, 87-93 and 95-100 are dependent on claims 80, 86 and 94 respectively. Accordingly, for at least the same reasons, claims 81-85, 87-93 and 95-100 are also patentable over Wycherley and Sylvan combined.

(9) Conclusion

Appellant respectfully submits, for at least the reasons set forth earlier, all rejected claims 80-100 are patentable over the cited references. Therefore, Applicant respectfully requests that the Board of Patent Appeals and Interferences overrules the Examiner, and directs allowance of the rejected claims.

(10) Epilogue

In addition, please charge any shortages and credit any overages to said Deposit Account.

Respectfully submitted, Schwabe, Williamson & Wyatt, P.C.

By Aloysius AuYeung, Reg No. 35,432 Attorney for Appellant Applicant

Appendix A – Claims As Pending

80.	(Unchanged)) A cover	comprising:
-----	-------------	-----------	-------------

1

- 2 a cover body to mate with a body of an electronic apparatus, to partially cover 3 a portion of a front surface of the body of the electronic apparatus not occupied by a 4 display and a plurality of keys of the electronic apparatus, the front surface of the 5 body of the electronic apparatus extending from a top edge of the body of the 6 electronic apparatus to a bottom edge of the body of the electronic apparatus and 7 from a left edge of the body of the electronic apparatus to a right edge of the body of 8 the electronic apparatus, and the cover body having an exterior surface non-9 functionally decorated to provide the electronic apparatus with one or more visually 10 perceivable attributes of a non-functional theme; and an electronic component embedded within the cover body, having data stored
- an electronic component embedded within the cover body, having data stored therein for customizing functions of the electronic apparatus to operate with characteristics complementary to the visually perceivable attributes of the non-functional theme provided by the non-functional decorations of the exterior surface of the cover body to jointly effectuate the non-functional theme.
 - 1 81. (Unchanged) The cover of claim 80, wherein the electronic component
 - 2 comprises data identifying to the processor of the body of the electronic apparatus,
- 3 which group of a plurality of covering groups the cover is a member of, each
- 4 covering group having a non-functional theme.

- 1 82. (Unchanged) The cover of claim 80, wherein the data comprises at least one of a
- 2 resource server specification, an email address, an electronic coupon, a font style,
- 3 an identifier identifying the interchangeable cover, and an approval code.
- 1 83. (Unchanged) The cover of claim 80, wherein the data comprises a selected one
- 2 of a pointer to an audio data file and a audio data file, where the audio data file
- 3 complements the visually perceivable attributes of the non-functional theme provided
- 4 by the non-functional decorations of the exterior surface of the cover body.
- 1 84. (Unchanged) The cover of claim 80, wherein the data comprises at least a
- 2 selected one of a pointer to a screen saver, a pointer to a video data file, a screen
- 3 saver and a video data file, where the screen saver/video data file is complementary
- 4 to the visually perceivable attributes of the non-functional theme provided by the
- 5 non-functional decorations of the exterior surface of the cover body.
- 1 85. (Unchanged) The cover of claim 80, wherein the electronic component
- 2 comprises a processor.
- 1 86. (Unchanged) A mobile phone comprising:
- a body including a top edge, a bottom edge, a left edge, a right edge, a front
- 3 surface extending from the top edge to the bottom edge and from the left edge to the
- 4 right edge, a display and a plurality of keys disposed on a plurality of regions of the
- 5 front surface, and an internally disposed processor to execute one or more
- 6 programming instructions; and

7 an interchangeable cover to mate with the body, to partially cover the rest of the front surface not occupied by the display and the plurality of keys, with the interchangeable cover having an exterior surface non-functionally decorated to provide the mobile phone with one or more visually perceivable attributes of a nonfunctional theme, and an electronic component embedded within the interchangeable cover, having data stored therein for customizing functions of the mobile phone to operate with characteristics complementary to the visually perceivable attributes of the non-functional theme provided by the non-functional decorations of the exterior surface of the interchangeable cover to jointly effectuate the non-functional theme.

- 1 87. (Unchanged) The mobile phone of claim 86, wherein the electronic component of
- 2 the interchangeable cover comprises data identifying to the processor of the body,
- 3 which group of a plurality of interchangeable covering groups the corresponding
- 4 interchangeable cover is a member of, each interchangeable covering group having
- 5 a non-functional theme.

16

- 1 88. (Unchanged) The mobile phone of claim 86, wherein the data comprises at least
- 2 one of a phone number, a resource server specification, an email address, an
- 3 electronic coupon, a font style, an identifier identifying the interchangeable cover,
- 4 and an approval code.
- 1 89. (Unchanged) The mobile phone of claim 86, wherein the data comprises a
- 2 selected one of a pointer to an audio data file and a audio data file, where the audio
- 3 data file complements the visually perceivable attributes of the non-functional theme

- 4 provided by the non-functional decorations of the exterior surface of the
- 5 interchangeable cover.
- 1 90. (Unchanged) The mobile phone of claim 89, wherein the audio data file
- 2 facilitates modification of a default voice greeting of the mobile phone to a voice
- 3 greeting that is complementary to the visually perceivable attributes of the non-
- 4 functional theme provided by the non-functional decorations of the exterior surface
- 5 of the interchangeable cover.
- 1 91. (Unchanged) The mobile phone of claim 89, wherein the audio data file
- 2 facilitates modification of ring tones of the mobile phone to ring tones that are
- 3 complementary to the visually perceivable attributes of the non-functional theme
- 4 provided by the non-functional decorations of the exterior surface of the
- 5 interchangeable cover.
- 1 92. (Unchanged) The mobile phone of claim 86, wherein the data comprises at least
- 2 a selected one of a pointer to a screen saver, a pointer to a video data file, a screen
- 3 saver and a video data file, where the screen saver/video data file is complementary
- 4 to the visually perceivable attributes of the non-functional theme provided by the
- 5 non-functional decorations of the exterior surface of the interchangeable cover.
- 1 93. (Unchanged) The mobile phone of claim 86, wherein the electronic component
- 2 comprises a processor.

94. (Unchanged) An electronic apparatus comprising:

1

7

15

16

a body including a top edge, a bottom edge, a left edge, a right, a front surface extending from the top edge to the bottom edge and from the left edge to the right edge, a display and a plurality of keys disposed on a plurality of regions of the front surface, and an internally disposed processor to execute one or more programming instructions; and

an interchangeable cover to mate with the body to partially cover the rest of the front surface not occupied by the display and the plurality of keys, with the interchangeable cover having an exterior surface non-functionally decorated to provide the electronic apparatus with one or more visually perceivable attributes of a non-functional theme, and an electronic component embedded within the interchangeable cover, having data stored therein for customizing functions of the electronic apparatus to operate with characteristics complementary to the visually perceivable attributes of the non-functional theme provided by the non-functional decorations of the exterior surface of the interchangeable cover to jointly effectuate the non-functional theme.

- 1 95. (Unchanged) The electronic apparatus of claim 94, wherein the electronic
- 2 component of the interchangeable cover comprises data identifying to the processor
- 3 of the body, which group of a plurality of interchangeable covering groups the
- 4 corresponding interchangeable cover is a member of, each interchangeable
- 5 covering group having a non-functional theme.
- 1 96. (Unchanged) The electronic apparatus of claim 94, wherein the data comprises
- 2 at least one of a resource server specification, an email address, an electronic

- 3 coupon, a font style, an identifier identifying the interchangeable cover, and an
- 4 approval code.
- 1 97. (Unchanged) The electronic apparatus of claim 94, wherein the data comprises a
- 2 selected one of a pointer to an audio data file and a audio data file, where the audio
- 3 data file complements the visually perceivable attributes of the non-functional theme
- 4 provided by the non-functional decorations of the exterior surface of the
- 5 interchangeable cover.
- 1 98. (Unchanged) The electronic apparatus of claim 94, wherein the data comprises
- 2 at least a selected one of a pointer to a screen saver, a pointer to a video data file, a
- 3 screen saver and a video data file, where the screen saver/video data file is
- 4 complementary to the visually perceivable attributes of the non-functional theme
- 5 provided by the non-functional decorations of the exterior surface of the
- 6 interchangeable cover.
- 1 99. (Unchanged) The electronic apparatus of claim 94, wherein the electronic
- 2 component comprises a processor.
- 1 100. (Unchanged) The electronic apparatus of claim 94, wherein the electronic
- 2 apparatus comprises a personal digital assistant.
